About Us

Safe Eats was born out of a desire to help others who are facing the challenges of finding food that is allergen friendly. Several years ago when our son was diagnosed with multiple food allergies and ultimately eosinophilic esophagitis our world was turned upside down and grocery shopping took hours. It is our hope that this application will provide others going down the same road ideas on products to try and also the ability to check if a certain item has the allergens needed to be avoided.
